PROFESSIONAL SUMMARY

Backend-heavy, full-stack engineer with hands-on experience building production systems, monetization infrastructure, and deploying applied ML models. Proven ability to own problems end-to-end, scale databases, and ship reliable APIs with zero-error tolerance. Passionate about building self-improving software and robust data pipelines.

SKILLS SUMMARY

Languages & Web: Python, Java, JavaScript (ES6+), HTML, CSS

Backend & Infra: Node.js, Express.js, REST APIs, CRON Jobs, Webhooks

Databases & Schema Design: MongoDB, Firebase Firestore, SQL, NoSQL Data Modeling

Applied ML & Data Pipelines: Scikit-learn, XGBoost, Random Forest, Pandas, NumPy

Tools & Operations: Git, GitHub, VS Code, Postman, Make, Server Health Monitoring

WORK EXPERIENCE

- Evangelion Solutions** **Jan 2026 – March 2026**
Backend Developer Intern *Hyderabad, India*
 - Owned and scaled production backend systems for a real-time social application serving high-concurrency caller-host sessions.
 - Designed low-latency Cloud Function APIs to handle call initiation, rapid switching, and secure termination.
 - Managed real-time Firestore database synchronization and schema design to track call states, availability, and session analytics.
- SyntecxHub** **Dec 2025 – Jan 2026**
Backend Intern Trainee (Infrastructure Focus) *Hyderabad, India*
 - Designed and deployed automated infrastructure reliability systems utilizing scheduled cron jobs for backend maintenance.
 - Built and maintained data pipelines for stale user deletion, session cleanup, and log archiving to ensure database efficiency.
 - Engineered health-check APIs and monitoring systems to continuously track server latency and database connectivity.

PROJECTS

- Paid Social Application** **Node.js, Express.js, Firebase Firestore**
Backend Architect & Developer
 - Built backend infrastructure for a paid social app with 2 roles (Caller/Host), handling automated revenue splits between platform and hosts.
 - Developed 5+ scalable APIs for call initiation, switching, termination, and secure coin-based billing.
 - Managed real-time Firestore database synchronization across 3 states: call activity, user availability, and role-based access control.
 - Reduced billing discrepancies to near 0 by engineering strict server-side coin deduction and session validation logic.
- AI School Analytics Platform** **Python, Scikit-learn, XGBoost, Node.js**
Full-Stack ML Developer
 - Built and deployed a 3-engine applied ML platform (Random Forest + XGBoost) on live production data to predict user churn and forecast growth.
 - Engineered 5+ end-to-end data pipelines to extract and process attendance, fees, marks, and discipline data into actionable features.
 - Reduced manual follow-up by 80% and cut identification time by 10x via Twilio WhatsApp automation triggered by real-time ML risk classification.
- Automated Event Pipeline Tracker** **Make, Webhooks, Gmail API, Sheets**
Automation Engineer
 - Owned end-to-end automation for a 4-stage pipeline (Webhook → Processing → Retrieval → Dispatch), reducing manual email effort by 95%.
 - Built an asynchronous HR reply tracker monitoring 500+ contacts, filtering bot responses, and alerting via Telegram instantly.
 - Achieved zero infrastructure cost by engineering the entire system on Make, Gmail APIs, and Google Sheets free tiers.

EDUCATION

- CMR College of Engineering and Technology** **2023 – Present**
Bachelor of Technology, CSE (AI & ML); GPA: 8.65 *Hyderabad, India*
- Sri Chaitanya Junior College** **July 2021 – June 2023**
Intermediate; Percentage: 95.5% *Hyderabad, India*

CERTIFICATIONS & CODING PROFILES

Certifications: Backend Development (SyntecxHub), HEXART Applied AI Certification

Coding Profiles: [LeetCode \(kothavivek55\)](#), [GeeksforGeeks \(kothavivek55\)](#)
